

ESAF SHANUM SHAKIL

Mumbra, Thane, Maharashtra | (+91) 7900185896 | esafshanum@email.com | linkedin.com/in/shanum-esaf-13132b374 | github.com/esafshanum

PROFESSIONAL SUMMARY

Artificial Intelligence & Data Science undergraduate with hands-on experience in developing AI-powered applications across Machine Learning, Natural Language Processing, Computer Vision, and Generative AI domains. Skilled in Python, SQL, CSS/HTML and data-driven problem solving, with practical exposure through academic projects and a Python Development & AI Applications internship. Passionate about building innovative real-world solutions, exploring emerging technologies, and seeking an entry-level opportunity to contribute technical expertise, creativity, and a strong learning mindset within a growth-oriented organization.

TECHNICAL SKILLS

- **Languages:** Python, SQL, HTML, CSS
- **Frameworks & Libraries:** Streamlit, Tkinter, OpenCV, LangChain, Hugging Face Transformers (BioBERT), NLP
- **Databases & Cloud:** SQL Databases, FAISS, Google Colab, Groq (Llama-3), Sarvam AI
- **Tools & Developer Methodologies:** Git, GitHub, Visual Studio Code, Jupyter Notebook, GitHub, PyPDF2, PyMuPDF, Tesseract OCR, Object-Oriented Programming (OOP), Debugging, Problem Solving

PROFESSIONAL EXPERIENCE

Python Development & AI Application Intern | IRABOT TechEd LLP, Navi Mumbai *June 2023 – July 2023*

- Completed a 6-week internship focused on Python programming and AI application development.
- Assisted in developing and testing AI-based solutions using Python.
- Collaborated with team members on project implementation and technical tasks.
- Enhanced understanding of artificial intelligence concepts and real-world applications.
- Participated in debugging, troubleshooting, and performance optimization of Python applications.
- Gained hands-on experience in software development practices, code testing, and project documentation.
- Contributed to the development of AI-driven solutions while strengthening analytical and problem-solving skills.

PROJECT EXPERIENCE

AI & Software Development Projects | 2024 – Present

- Developed AI-powered solutions in healthcare, computer vision, and intelligent automation domains, including medical report summarization, facial recognition attendance systems, and task scheduling applications.
- Designed and implemented end-to-end applications using Python, Machine Learning, Natural Language Processing (NLP), OpenCV, and Generative AI technologies.
- Utilized modern AI frameworks and tools such as LangChain, FAISS, BioBERT, Groq (Llama-3), and OpenCV to build scalable and user-centric solutions.
- Integrated multilingual support, conversational AI, and intelligent data processing capabilities to enhance accessibility, automation, and user experience.

TECHNICAL PROJECTS

AI Medical Report Summarizer | Python, Streamlit, LangChain, FAISS, BioBERT, Groq (Llama-3)

- Developed an AI-powered medical report summarization platform supporting 11 Indian languages for doctors, patients, and healthcare workers.
- Implemented BioBERT-based clinical entity extraction and a RAG pipeline to generate role-specific summaries from medical documents.
- Integrated multilingual voice readout and an interactive chatbot for follow-up medical queries, improving accessibility and user engagement.

Multiple Face Recognition Attendance System | Python, OpenCV, Haar Cascade, LBPH Algorithm

- Developed a real-time attendance management system capable of detecting and recognizing multiple faces using computer vision and facial recognition techniques.
- Implemented Haar Cascade and LBPH algorithms to accurately identify individuals and automate attendance recording, reducing manual effort and errors.
- Designed a scalable and efficient solution for educational institutions, improving attendance tracking, data management, and operational efficiency.

Smart Task Scheduler with AI Integration | Python, NLP, Machine Learning

- Developed an AI-powered task scheduling system that extracts tasks from user input and automatically assigns priorities based on urgency and importance.
- Implemented Natural Language Processing techniques to analyze user requirements and organize daily activities efficiently.
- Enhanced productivity and task management by providing intelligent scheduling recommendations and streamlined workflow planning.

EDUCATION

Bachelor of Engineering (B.E.) in Artificial Intelligence & Data Science Terna Engineering College | 2024 – 2027

Relevant Coursework: Artificial Intelligence, Machine Learning, Data Structures & Algorithms, Database Management Systems, Programming in Python, Natural Language Processing, Computer Vision.

Diploma in Artificial Intelligence & Machine Learning A. R. Kalsekar Polytechnic | 2021 – 2024 | **85.50%**

Relevant Coursework: Python Programming, SQL, Artificial Intelligence, Machine Learning Fundamentals, Data Analytics, Software Development.

CERTIFICATIONS & ACHIEVEMENTS

Certifications

- Google Gen AI Exchange Program – Completed training on Generative AI fundamentals, prompt engineering, and real-world AI applications (2025).
- Blockchain Technology Workshop – Participated in a hands-on workshop covering blockchain fundamentals at Terna Engineering College (2025).

Achievements

- Research paper titled "*Multiple Face Recognition Attendance System*" published in the International Journal of Research and Analytical Reviews (IJRAR) on 14 March 2024.
- 3rd Prize – Technical Paper Presentation Event at F. R. Agnel College, Vashi.
- Winner of multiple team and individual sports competitions at inter-college and external events.
- Active participant in hackathons, technical quizzes, project exhibitions, and paper presentation competitions.
- Member of student council committees and event organising committees in college level.
